Medical Report

DOCUMENT NAME: Medical Report  
SERVICE DATE/TIME: 10/8/2023 14:47 AST  
RESULT STATUS: Auth (Verified)  
PERFORM INFORMATION: SYED MUHAMMAD SHAH -411100 PSMC  
(10/8/2023 14:53 AST)  
SIGN INFORMATION: SYED MUHAMMAD SHAH -411100 PSMC  
(10/8/2023 14:53 AST)

**Present Complaints:**

- 1- Hydrocephalus.
- 2- Status-post ventriculoperitoneal shunt.

**Brief History:**

The patient is approximately 8-year-old male was diagnose as a case of posterior fossa cyst with Dandy-walker, intra-ventricular hemorrhage and hydrocephalus. Brain imaging was done then was considered as candidate for CSF diversion. The patient underwent endoscopic fenestration in attempt to divert CSF but it was not successful. So, another surgery was done on 31 March 2016 where ventriculoperitoneal shunt was inserted. The patient tolerated the procedure well and was discharged from neurosurgery side. The patient had regular follow-up in Neurosurgical Clinic. The patient showed gradual improvement in the clinical status but with delayed milestones. The patient was last time seen 28/08/2023. There was no new issues. He was having spasticity in the lower limbs but was able to walk with some support and was on regular physiotherapy that was helping him to improve his condition.

**Allergies**

No Known Allergies

**Examination:**

spastic in lower limb but walker and good power  
shunt reservoir clinically refilling well

**Investigations:**

**Medications**

**Inpatient**

No active inpatient medications

**Home**

Botulinum A Toxin 100units/mL INJ, See Instructions  
Sodium Hyaluronate 0.2% Eye Drops, 1 drops, Eye-Right, TID (NG)

**Diagnosis:**

Hydrocephalus

**Management:**

Ventriculoperitoneal Shunt
